Products Reach Shelves Faster with New Microbiological Testing

Scienceceuticals offering additional competitive advantages and cost-savings to its customers

SUMMERVILLE, SC – Scienceceuticals, Inc. has announced the addition of in-house microbiological testing for its contract manufactured personal care products in both its Summerville, SC, and Reno, NV facilities. By performing these tests on-site, the development cycle of Scienceceuticals' customers' products is shortened by up to two weeks. Also, as a result of eliminating the cost of outsourcing these tests, customers will see a cost-savings.

"We have expanded our testing capabilities to better meet and exceed our customers' needs," said [Donald Hayden](#), Founder and CEO of Scienceceuticals. "Scienceceuticals' success is based on the speed of bringing quality products to market for our customers."

The sooner the product has passed the testing, the quicker it is able to be packaged and shipped to the customer. In turn, customers are able to bring their products to the market faster and more efficiently. In addition to Scienceceuticals' current testing capabilities, including stability and compatibility, microbiological testing will expand the company's productivity and increase customer satisfaction.

Microbiological testing is needed to ensure that microorganisms don't grow and reproduce during the shelf life of the [personal care products](#) developed and manufactured by Scienceceuticals. If organisms are allowed to replicate, they could cause spoilage, chemical changes, or even injury to the user of the product.

Scienceceuticals is using 3M™ technology to conduct the microbiological testing, including 3M Petrifilm™ Plates. This AOAC® Official MethodSM yields Yeast and Mold and Total Aerobic plate counts. In addition to testing customers' products, Scienceceuticals also uses the setup to perform environmental testing on the production and batching equipment

About Scienceceuticals

Scienceceuticals provides custom development, formulation, testing, manufacturing and distribution services to some of the world's largest skin care, personal care, cosmetic, and pharmaceutical companies. Additionally, Scienceceuticals offers [private label skincare](#) and [private label cosmetics](#) product lines to a variety of industries. By linking its knowledge of chemistry and [contract manufacturing](#) to a thorough understanding of the cosmetics and skin care industry, Scienceceuticals helps customers seize opportunities, build brands and grow profits. With locations in New York, South Carolina, Nevada, California, and China, Scienceceuticals' products and services are found around the world. For more information, visit www.scienceceuticals.com.
